Table of Contents

1. Executive Summary

Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **oliogalia.com** for a **E-commerce + Local Producer (Premium Sicilian Extra Virgin Olive Oil)** site, generated on June 28, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

36/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** All 6 product pages return HTTP 500 — site not indexed by Google (site: query returns 0 results)
2. **Info:** Product page.tsx is 'use client' — product content invisible to crawlers
3. **Info:** JSON-LD injected via next/script afterInteractive + Math.random() ID (hydration mismatch)
4. **Info:** www/non-www split with 307 TEMPORARY redirects contradicting canonical tags
5. **Info:** Hero video is 29 MB 4K MP4 with no poster + hero text has opacity-0 on SSR — zero LCP candidate

Quick Wins:

1. Fix 'Cassaro' → 'Ferla' in layout.tsx:47 (5 min)
2. Replace placeholder address in it.json:282 (5 min)
3. Fix metadataBase fallback .it → .com in layout.tsx:45 (5 min)
4. Add OG image and logo to /public/images/ (10 min)
5. Create /public/llms.txt for AI search readiness (30 min)

2. Audit Categories

2.1 Technical SEO

Score: **41/100**

What Works

- HTTP/2 enabled
- Mobile-responsive
- HTTPS with HSTS
- Next.js Image component serving WebP

Findings

Product pages are fully Client-Side Rendered **Critical**

src/app/(shop)/products/[slug]/page.tsx opens with 'use client'. All product content fetched via useProductBySlug() hook after JS hydration. Initial HTML = loading spinner only.

Recommendation: Convert to Server Component. Remove 'use client', use getProduct() already available in layout.tsx. Isolate interactive children as separate Client Components.

JSON-LD structured data never in server-rendered HTML **Critical**

StructuredData component uses next/script without strategy prop (defaults to afterInteractive). Also uses Math.random() for ID causing React hydration mismatch.

Recommendation: Use inline <script type='application/ld+json' dangerouslySetInnerHTML> in Server Components. Use stable deterministic IDs.

www/non-www 307 temporary redirect contradicting canonicals **Critical**

oliogalia.com/products → 307 (temporary) → www.oliogalia.com/products. Canonical on www points back to non-www. 307 does not pass PageRank.

Recommendation: Add permanent redirect in vercel.json: www.oliogalia.com → oliogalia.com with permanent: true.

OG image and logo return 404 **Critical**

/images/og-image.jpg and /images/logo.png both return 404. Every social share shows blank image. Organization schema invalid.

Recommendation: Add files to /public/images/ or update paths to R2 CDN URLs in metadata.ts and structured-data.tsx.

English content completely uncrawable — zero hreflang **Critical**

Locale stored in localStorage, never in URL. /en → 404. No hreflang tags anywhere. html lang='it' translate='no' globally.

Recommendation: Implement Next.js App Router [locale] segment routing (/en/products, /it/products). Add hreflang alternates. Submit EN sitemap.

HTTP 500 on all 6 product pages **Critical**

All product URLs in sitemap return HTTP 500. Next.js injects noindex on 500 pages. Google actively de-indexes them.

Recommendation: Debug Vercel function logs for /api/products/[slug]. Check MongoDB connection string and environment variables.

metadataBase fallback uses wrong TLD (.it instead of .com) **High**

layout.tsx:45 and subscribe/layout.tsx:3 both fallback to 'https://oliogalia.it'.

Recommendation: Change both fallbacks to 'https://oliogalia.com'. Confirm NEXT_PUBLIC_SITE_URL=https://oliogalia.com in Vercel settings.

Missing critical security headers **High**

Missing: X-Frame-Options, X-Content-Type-Options, Content-Security-Policy, Referrer-Policy, Permissions-Policy. HSTS present but missing includeSubDomains and preload.

Recommendation: Add headers configuration to next.config.ts for all 5 missing headers.

2.2 Content Quality

Score: 46/100

What Works

- Strong 1940 family heritage narrative
- Tonda Iblea cultivar specificity
- Milling within 24 hours claim
- Certified organic farming mentioned

- Three-brother team with credentials in data

Findings

FAQ Q&A content exists in it.json but FaqListSection component doesn't render it **Critical**

8 fully-written Q&A pairs in src/data/locales/it.json (production method, DOP claim, certifications, farm visits) are not displayed. Live page shows only heading.

Recommendation: Debug FaqListSection component — fix data-prop passing or rendering guard that prevents Q&A from displaying.

Hero description fields are empty strings **Critical**

hero.description.main and hero.description.secondary = "" in both it.json and en.json. Above-the-fold shows only three single-word headings.

Recommendation: Fill description fields with actual marketing copy describing the brand and product.

Contact info placeholders never replaced **Critical**

FAQ contact block in it.json contains info@example.it and +39 XXX XXX XXXX — may render as live contact information.

Recommendation: Replace with actual contact info: info@oliogalia.it and +39 3793475975.

Homepage H1 is brand name only — no keyword **High**

H1 = 'Olio Galia' with no keyword. Search engine cannot determine primary topic.

Recommendation: Change to: 'Olio Extravergine di Oliva Biologico Siciliano — Olio Galia'

No blog or informational content — zero top-of-funnel coverage **High**

No blog section exists. Zero pages target informational queries (EVO benefits, production process, Tonda Iblea guide, DOP Monti Iblei).

Recommendation: Create minimum 3 blog posts: EVO benefits, production process, Tonda Iblea/DOP guide.

Family photos are code TODOs — not inserted **High**

/nonno-paolo-1940.jpg and other family photos referenced as TODOs in source code. Strongest E-E-A-T lever for a family producer is not deployed.

Recommendation: Insert actual family/production photos throughout the About page.

2.3 On-Page SEO

Score: **32/100**

What Works

- Homepage has meta title
- Privacy policy, T&C, cookie policy present
- VAT number visible

Findings

Wrong town in root layout description — NAP contradiction **Critical**

layout.tsx:47 description: '100% Olio Extravergine da Cassaro, Sicilia'. Cassaro is a different comune ~10km from Ferla. Every other page correctly says Ferla (SR).

Recommendation: Change to: 'Olio extravergine di oliva Tonda Iblea prodotto a Ferla (SR), Sicilia, dal 1940.'

Footer address is an unreplaced placeholder **Critical**

src/data/locales/it.json:282 = 'Via Example 123, Città'. If NEXT_PUBLIC_CONTACT_ADDRESS env var not set, every page footer shows fictional address.

Recommendation: Replace with: 'Via Umberto I, n.121 — 96010 Ferla (SR), Sicilia'

Transactional pages not noindexed **High**

/checkout/success, /checkout/subscription-success, /conferma-ordine, /feedback/[orderId], /manage-subscription are all indexable.

Recommendation: Create layout.tsx with generateNoIndexMetadata() for each page — pattern already exists in /cart/layout.tsx.

2.4 Schema / Structured Data

Score: **20/100**

What Works

- BreadcrumbList schema structure is valid
- Product and Organization schema generators exist in codebase

Findings

Product schema injected via JavaScript — never in initial HTML **Critical**

next/script afterInteractive strategy means structured data is client-side only. Googlebot first-wave crawl sees zero structured data.

Recommendation: Use inline `<script type='application/ld+json'>` in Server Components instead.

Math.random() used for schema script ID **Critical**

`id={`structured-data-${Math.random()}`}` causes guaranteed React hydration mismatch on every render.

Recommendation: Use stable caller-provided IDs (e.g., 'sd-organization', 'sd-product').

Organization schema incomplete **High**

address has only addressCountry: 'IT'. sameAs array is empty/commented out. telephone absent.

Recommendation: Add full PostalAddress, telephone, email, vatID, sameAs with actual social profile URLs.

No LocalBusiness schema **High**

No LocalBusiness or FoodEstablishment schema anywhere on the site. Complete template provided in findings/local.md.

Recommendation: Add LocalBusiness / FoodEstablishment JSON-LD to homepage.

aggregateRating never passed to Product schema **High**

generateProductSchema() accepts rating data but the call site in layout.tsx always passes undefined. No star ratings in SERPs.

Recommendation: Fetch review aggregate from MongoDB and pass to generateProductSchema() in layout.tsx.

6 pages with zero schema **Medium**

/products, /about, /contact, /faq, /sostenibilita, /smaltimento-rifiuti have no JSON-LD.

Recommendation: Add appropriate schema types: FAQPage (faq), ContactPage (contact), AboutPage or Organization (about).

2.5 Performance (CWV)

Score: **35/100**

What Works

- HTTP/2 enabled
- Next.js Image serving WebP
- Self-hosted fonts with font-display:swap and calibrated fallback metrics
- Below-fold images using loading=lazy

Findings

29 MB 4K hero video with no poster — estimated LCP 10–30s on mobile **Critical**

Hero video served from R2 CDN with no poster attribute. No preconnect for R2 origin. Browser must buffer first video frame before any above-fold LCP candidate exists.

Recommendation: Add WebP poster image (60–80 KB still from first frame). Add R2 preconnect. Encode 1080p VP9 version (~80% size reduction).

Hero text has opacity-0 on SSR — zero LCP candidate **Critical**

HeroSection uses `useState(false) + useEffect(() => setIsVisible(true))`. SSR HTML ships with opacity-0 on all hero text. Combined with posterless video = zero LCP candidate for seconds.

Recommendation: Replace JS visibility state with CSS animation (`animation-fill-mode: forwards`) so text is visible in SSR HTML.

Adobe Typekit CSS is render-blocking **High**

Synchronous `<link>` to `use.typekit.net` with `font-display:auto`. No preconnect. Adds 200–600ms to FCP on every page.

Recommendation: Add preconnect for `use.typekit.net` and `p.typekit.net`. Long-term: self-host via `next/font/local`.

70 KB loading spinner PNG preloaded at high priority **High**

Loading spinner preloaded at `fetchpriority='high'`, displacing genuinely critical LCP resources from the preload queue.

Recommendation: Remove `fetchpriority='high'` from spinner image preload.

2.6 AI Search Readiness

Score: **28/100**

What Works

- AI crawlers implicitly allowed via wildcard robots.txt
- 1940 founding year is citable
- Tonda Iblea cultivar specificity
- Physical address present

Findings

No llms.txt file **High**

Both /llms.txt and /llms-full.txt return 404. AI systems must infer brand facts from sparse crawl content.

Recommendation: Create /public/llms.txt. Complete template provided in findings/geo.md.

FAQ page invisible to AI crawlers **High**

All Q&A content loads via client-side JavaScript. AI crawlers (static HTML parsers) see zero FAQ content from the site's highest-value citable asset.

Recommendation: Fix FaqListSection rendering bug (server-side render the Q&A pairs). Add FAQPage JSON-LD schema.

No Wikipedia entity, YouTube channel, or Reddit mentions **High**

Three highest-correlation AI citation signals are absent. AI systems have no canonical entity reference for the brand.

Recommendation: Build off-site authority anchors in parallel with on-site fixes. Target Wikipedia citation once 3 notable press citations exist.

2.7 Images

Score: **30/100**

What Works

- Next.js Image component configured
- WebP serving via /_next/image

Findings

OG image returns 404 **Critical**

/images/og-image.jpg → 404. Every social share on all platforms shows blank image.

Recommendation: Add 1200×630px OG image to /public/images/ or update path to R2 CDN URL.

Product images inaccessible (500 errors on product pages) **Critical**

Cannot audit product image alt text or quality — all product pages return HTTP 500.

Recommendation: Fix product page 500 errors first, then audit image alt text and file sizes.

3. Action Plan

Phase 1: Emergency Fixes Week 1

- Debug and fix HTTP 500 on all product pages (Vercel logs, MongoDB connection)
- Convert product page.tsx from CSR to SSR
- Fix hero text opacity-0 SSR bug (useState → CSS animation)
- Fix www → non-www permanent redirect in vercel.json
- Add OG image and logo to /public/images/
- Fix metadataBase fallback .it → .com in layout.tsx:45 and subscribe/layout.tsx:3
- Fix wrong town 'Cassaro' → 'Ferla' in layout.tsx:47
- Replace footer address placeholder in it.json:282
- Replace contact info placeholders (info@example.it, +39 XXX) in it.json
- Fix FAQ rendering bug in FaqListSection component
- Fill hero.description.main and hero.description.secondary in it.json and en.json
- Submit to Google Search Console and request indexation

Phase 2: High-Impact Improvements Weeks 2–3

- Move JSON-LD to SSR <script> tags, fix Math.random() IDs
- Add security headers in next.config.ts
- Add video poster + R2 preconnect for LCP
- Add Typekit preconnect or self-host fonts
- Populate Organization schema (address, telephone, email, vatID, sameAs)
- Add LocalBusiness / FoodEstablishment schema to homepage
- Wire aggregateRating data to Product schema call site
- Noindex transactional pages (checkout/success, conferma-ordine, feedback, manage-subscription)
- Create /public/llms.txt
- Fix sitemap (add /faq and /sostenibilita, remove 500-error products, fix canonical domain)
- Update homepage H1 to include keywords
- Remove translate='no' from root layout
- Replace social <button> elements with <a> tags, populate sameAs array
- Create Google Business Profile for Ferla (SR)

Phase 3: Content & International Authority Month 2

- Implement Next.js App Router i18n routing with /en/ and /it/ URL prefixes
- Add hreflang alternates to all pages
- Submit EN sitemap
- Convert About page from client to server component with proper metadata
- Insert family photos (currently code TODOs)
- Add polyphenol data, acidity %, harvest year to product pages
- State certification body name and certificate number explicitly
- Publish blog post 1: Benefits of Sicilian extra virgin olive oil
- Publish blog post 2: How Olio Galia is produced
- Create EN gift landing page for international buyers
- Add Google Shopping required schema fields
- Submit to Gambero Rosso, FLOS OLEI, Slow Food Presidia, Olive Oil Times

Phase 4: Monitoring & Iteration Ongoing

- Weekly: Monitor GSC Coverage report for crawl errors
- Implement IndexNow for Bing/Yandex
- Monitor Core Web Vitals in GSC after video and font fixes
- Request Google reviews from existing customers
- Monthly: Run /seo drift baseline to track SEO changes
- Rebuild full audit at 90 days — target: 65/100

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — June 28, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
